

PRAYATNA MANAGEMENT SYSTEM

1. Introduction

Project Name: Prayatna Management System

Objective:

This system is designed to manage all internal operations of the organization including staff, departments, sales, HR processes, and child-related records in a centralized and secure platform.

The goal is to:

- Improve operational efficiency
 - Reduce manual work
 - Provide better tracking and reporting
 - Ensure secure data management
-

2. System Overview

The system will be a web-based application accessible by different staff members based on their roles.

It includes:

- Role-based access control
 - Department-wise management
 - Staff performance tracking
 - Sales & lead management
 - HR & payroll system
 - Child record management with secure storage
-

3. CORE MODULES & FEATURES

3.1 Super Admin & Access Control System

Description:

This module controls the entire system and defines what each user can access.

Features:

- Super Admin dashboard
- Role creation (Admin, HR, Sales, Therapist, etc.)
- Module-based permissions
- View / Edit / Delete access control

Workflow:

1. Admin creates roles
 2. Assigns permissions for each module
 3. Assigns roles to staff
 4. Staff login → sees only allowed modules
-

3.2 Department & Staff Management

Description:

Manage all departments and employees within the organization.

Features:

- Create departments
 - Assign Head of Department
 - Add/Edit/Delete staff
 - Assign roles and departments
 - Staff hierarchy (Manager → Employee)
-

3.3 Staff Target & Performance Management

Description:

Track staff productivity and assign measurable targets.

Features:

- Set targets (daily / monthly / yearly)

- Department-wise or individual targets
- Track performance automatically
- Progress percentage calculation

Workflow:

1. Admin sets targets
 2. Staff performs tasks
 3. System updates progress
 4. Dashboard shows performance
-

3.4 Sales & Lead Management

Description:

Manage incoming leads and track sales performance.

Features:

- Lead capture (manual + automatic)
 - Pipeline stages:
 - New Lead
 - Contacted
 - Follow-up
 - Converted
 - Sales target tracking
 - Performance reports
-

3.5 Google Ads Lead Integration

Description:

Automatically capture leads from marketing campaigns.

Features:

- Integration with Google Ads
- Automatic lead creation

- Auto assignment to sales team

Workflow:

1. Lead generated via Ads
 2. Data sent to system
 3. Lead created automatically
 4. Assigned to sales
-

3.6 Child Management System

Description:

Maintain records of children and related data securely.

Features:

- Child profile creation
- Assign staff (therapist/doctor)
- Upload documents, images, and videos
- Basic activity tracking

Security:

- Encrypted file storage
 - Restricted access
-

3.7 HR Management System

Description:

Handle employee-related operations.

Features:

- Employee records
 - Leave management
 - Attendance tracking
-

3.8 Attendance & ESSL Integration

Description:

Track employee attendance using biometric devices.

Features:

- Biometric (ESSL) integration
- Automatic attendance sync
- Check-in / Check-out tracking

Workflow:

1. Staff marks attendance via device
 2. Data synced to system
 3. Attendance updated automatically
-

3.9 Payroll & Salary Management

Description:

Manage salary processing and payslips.

Features:

- Salary structure setup
 - Automatic salary calculation
 - Deductions & bonuses
 - Payslip generation
-

3.10 Reports & Dashboard

Description:

Provide insights and analytics for management.

Dashboard Includes:

- Total staff
- Attendance summary
- Sales performance
- Department performance

Reports:

- Staff performance reports
 - Sales reports
 - HR reports
-

3.11 Document Management System**Features:**

- Store staff and child documents
 - Categorized storage
 - Secure access
-

3.12 Audit Logs**Description:**

Track all system activities.

Features:

- Login history
 - Data changes tracking
 - User activity logs
-

3.13 Notification System**Features:**

- Internal alerts
 - Task reminders
 - Target alerts
-

4. System Workflow**End-to-End Flow:**

1. Lead generated (Google Ads / manual)

2. Assigned to sales team
 3. Sales follow-up and conversion
 4. Child registered (if applicable)
 5. Assigned to department and staff
 6. Staff performs tasks / sessions
 7. Attendance tracked via biometric
 8. HR processes payroll
 9. Reports generated for management
-

5. Security Features

- Role-based access control
 - Encrypted file storage
 - Secure login system
 - Activity logs
-

6. Technology Stack

- **Frontend:** React (Web Application)
 - **Backend:** Django REST Framework
 - **Database:** PostgreSQL
 - **Storage:** Cloud storage (AWS S3 / R2)
 - **Server:** VPS / Cloud Server
-

7. Benefits to Organization

- Centralized system
- Improved efficiency
- Better staff tracking
- Accurate reporting
- Secure data management

8. Future Enhancements

- Mobile application
- Advanced analytics
- Automation workflows
- Integration with additional tools

9. Conclusion

The proposed system will provide a **complete digital transformation** for the organization by integrating all operations into a single platform.

It will improve productivity, transparency, and decision-making capabilities.
